## IN THE CLAIMS

The status of the claims is as follows:

- 1. (Original) A delivery source of oxygen for oxygenating blood and tissue, the source comprising at least one oxygen carrier supported by a substrate.
- 2. (Original) The source of claim 1 wherein the oxygen carrier is incorporated into the substrate.
- 3. (Original) The source of claim 1 wherein the oxygen carrier is attached to the substrate.
- 4. (Original) The source of claim 1 wherein the substrate comprises a membrane or thin film.
- 5. (Original) The source of claim 1 wherein the substrate comprises a hollow tube.
- 6. (Original) The source of claim 3 wherein the tube comprises a porous inner surface membrane incorporating the oxygen carrier and the source further comprises a channel transport system for passing liquid through the porous surface.
- 7. (Original) The source of claim 1 wherein the substrate comprises an inflatable balloon.
- 8. (Original) The source of claim 7 wherein the oxygen carrier comprises a thin film membrane wrapped around a surface of the balloon.
- 9. (Original) The source of claim 1 wherein the substrate comprises a perfusion balloon catheter.

- 10. (Original) The source of claim 9 further comprising a removable housing disposed around a balloon portion of the balloon catheter.
- 11. (Original) The source of claim 9 further comprising an eluding portion, on a surface of the catheter, having a plurality of holes communicating with a perfusion channel through the balloon catheter.
- 12. (Original) The source of claim 1 wherein said substrate comprises a coronary wire.
- 13. (Original) The source of claim 12 wherein the oxygen carrier is firmly attached to a tip of said coronary wire.
- 14. (Original) The source of claim 1 wherein said substrate comprises a stent delivery balloon.
- 15. (Original) The source of claim 1 wherein said substrate comprises a tissue patch.
- 16. (Original) The source of claim 1 wherein said substrate comprises an ionizing radiation source.
  - 17. (Cancelled)
  - 18. (Cancelled)
- 19. (Original) The source of claim 1 wherein said substrate comprises a porous polymer.
- 20. (Original) The source of claim 19 wherein said porous polymer includes pores having sizes the range of about 20 to about 200 microns.

- 21. (Original) The source of claim 19 wherein said porous polymer is selected from a group of polymers including Teflon, polyethylene, polyethylene terephtalate, nylon, silicon, and cellulose acetate.
- 22. (Original) The source of claim 1 wherein said oxygen carrier comprises a fluorocarbon.
- 23. (Original) The source of claim 1, wherein said oxygen carrier comprises a fluorocarbon solution.
- 24. (Original) The source of claim 1, wherein said oxygen carrier is lipophilic.
- 25. (Original) The source of claim 1 further comprising a housing for protectively covering said substrate in order to prevent leakage of gaseous liquids.
- 26. (Original) The source of claim 1 further comprising a removable protective film coating covering said substrate in order to prevent escape of oxygen molecules.
- 27. (Original) The source of claim 1, wherein the oxygen carrier is present in a liquid solution disposed in a housing container.
- 28. (Original) The source of claim 1, wherein said substrate comprises a porous polymer, wherein the polymer includes pores having sizes in the range of about 20 through 200 microns and wherein the polymer is selected from a group of polymers including Teflon, polyethylene, polyethylene terephtalate, nylon, silicon, and cellulose acetate.
